# Author Index to Volume 49

(L) indicates Letters to the Editor, (E) indicates Errata, and (T) indicates Title only. It will be noted that there are no references to "see someone else" in the Author Index. Although it has meant a little duplication, there has been included under each author all articles in which he was author or co-author. All articles in which the author has participated are arranged in the chronological order of publication. A bibliography with author names arranged as in the original article is obtained by insertion of the author's name in the indicated (——) space under each indexed name. Although not strictly an authored article, we have included Book Reviews both under the book author as well as the reviewer.

The abstracts of papers presented at meetings are keyed by the same notation that identified them by day and session of presentation. If the paper covered by the abstract has been submitted and published in the same year as the abstract, this has been indicated by a solidus (/) between the abstract notation and the Journal page of the full article, i.e., 264(FA*12*)/622 indicates that the paper described in abstract No. FA*12* on page 264 has been published in full on page 622.

**Adler, Hubert J.** Device for the simultaneous observation and coaxial illumination of very narrow cavities—102(L)

**Allen, Eugene.** Convenient color indices for near-white samples—1227(L)

**Ambs, W. J.**
**Kruger, J. and ——.** Optical measurements on thin films of condensed gases at low temperatures—1195

**Andrew, Kenneth L.**
**—— and K. W. Meissner.** Arc spectrum of germanium —146
**—— and K. W. Meissner.** Contribution to the first spark spectrum of germanium (Ge II)—1086

**Ångström, A. K.**
**—— and A. J. Drummond.** Transmission of "cutoff" glass filters employed in solar radiation research—1096
**Karoli, A. R., ——, and A. J. Drummond.** Dependence on atmospheric pressures of the response characteristics of thermopile radiant energy detectors—1138(SB*35*)

**Armington, John C.** Chromatic and short term dark adaptation of the human electroretinogram—1169

**Armstrong, Baxter H. and Hugh P. Kelly.** Asymptotic hydrogenic matrix elements and gaunt factors—949

**Astheimer, Robert W.**
**—— and Eric M. Wormser.** High-speed infrared radiometers—179
**—— and Eric M. Wormser.** Instrument for thermal photography—184

**Baines, H.** *The Science of Photography* (Book). Reviewed by Lloyd E. Varden—492

**Baird, K. M.** N.P.L. Symposium on Interferometry—1126(T*1*)

**Baker, Howard D.**
——. Instantaneous difference thresholds to dimmed and brightened backgrounds—502(TD*74*)
——, **Michael D. Doran, and Knox E. Miller.** Early dark adaptation to dim luminances—1065

**Baker, James G.** Book review of *Modern Geometrical Optics* by M. Herzberger—1228

**Ball, R. J. and G. A. Fry.** Color mixture data for the violet end of the spectrum—498(TB*45*)

**Ballard, Stanley S.**
**Wolfe, William L., ——, and Kathryn A. McCarthy.** Optical materials; data deficiencies—496(TA*12*)
**McCarthy, Kathryn A., ——, and William L. Wolfe.** Relationship between the optical absorption edge and the thermal conductivity of several crystalline materials —504(FA*11*)
—— The fifth general meeting of the International Commission of Optics—1132(F*2*)

**Barbrow, Louis E.** Memorandum on a procedure for obtaining spectral radiant intensities of tungsten-filament lamps, 400–700 mμ—1122(L)

**Bartleson, C. J.** Notes on the Nickerson-Judd-Wyszecki chromatic value transformation—489(L)

**Bass, Arnold M. and Karl G. Kessler.** Large-aperture grating spectrograph utilizing commercial camera components—1223

**Bates, Frederick J.** Necrology—311

**Battersby, William S. and Irving H. Wagman.** Neural limitations of visual excitability. I. The time course of monocular light adaptation—752

**Bauer, S. H.**
**Waelbroeck, Francois and ——.** Intense Schumann-Runge source—102(L)

**Baumeister, Philip W.**
—— Graphical methods of calculating the reflectance of a multilayer—513(SB*41*)
——, **F. A. Jenkins, and M. A. Jeppesen.** Characteristics of the phase-dispersion interference filter—1188

**Baumgardt, Ernest**
**Hillmann, Beverly M. and ——.** Relation of changing size and exposure time to absolute sensitivity in the peripheral retina—503(TD*77*)

**Beasley, J. K.**
**Billmeyer, F. W., Jr., ——, and J. A Sheldon.** Formulation of transparent colors with a digital computer—1136(SA*15*)

**Beattie, Willard H.**
**Meehan, E. J. and ——.** Light scattering functions for spherical particles with $m$=1.75—735(L)

**Benford, J. R.** Microscope for the ultraviolet—508(FC*64*)

**Bennett, H. E. and W. F. Koehler.** Instrument for measuring regular reflectance with precision—513(SB*43*)

**Bennett, Jean M.**
**—— and W. F. Koehler.** Comparator with photoelectric detection for setting on broad interference fringes with precision—466
—— **and W. F. Koehler.** Precision measurements with a photoelectric scanning comparator—513(SB*44*)

**Berning, P. H., G. Hass, and R. P. Madden.** Reflectance-increasing coatings for the vacuum ultraviolet and their applications—1129(T*51*)

**Betz, H. T.**
**Thomas, A. R., ——, D. Mergerian, and W. A. Oberheim.** Refractive index determinations in the 0.5–13.0μ region at elevated temperatures—497(TA*14*)

**Beyen, Werner, Peter Bratt, Howard Davis, Leon Johnson, Henry Levinstein, and Alfred MacRae.** Cooled photoconductive infrared detectors—686

**Biber, H. E. and S. Levy.** Characteristics of a combination discharge and its applicability in spectrochemical analysis of metals—349

**Bieber, C. F. and H. L. Clark.** The 100-inch air-borne radiometer—501(TC*64*)

**Bieniewski, T. M.**
**Czyzak, S. J., R. C. Crane, and ——.** Dichroism in essen-

**Bieniewski, T. M.**
**Czyzak, S. J., R. C. Crane, and ——.** Dichroism in essen-

tially pure and activated cadmium sulfide single crystals —485
**Billmeyer, Fred W., Jr.**
—— Measurement of optical clarity by low-angle light scatering—368
—— Use of a digital readout unit in converting spectrophotometric data to color coordinates—1136(SA*14*)
——, **J. K. Beasley, and J. A. Sheldon.** Formulation of transparent colors with a digital computer—1136(SA*15*)
**Bird, George R. and W. A. Shurcliff.** Pile-of-plates polarizers for the infrared: improvement in analysis and design —235
**Birkeland, J. W. and J. H. Shaw.** Abundance of nitrous oxide in ground-level air—637
**Bitterli, C. V.**
**Mahan, A. I., ——, and C. G. Wein.** Far-field diffraction and boresight error properties of a two-dimensional wedge—535
**Blackwell, H. Richard**
—— **and O. Mortenson Blackwell.** Blue mono-cone monochromacy: comparisons with rod monochromacy—499(TB*47*)
—— **and O. Mortenson Blackwell.** Blue cone systems isolated in atypical congenital achromatopsia—1137(SA*22*)
**Blackwell, O. Mortenson**
**Blackwell, H. Richard and ——.** Blue mono-cone monochromacy: comparisons with rod monochromacy—499(TB*47*)
**Blackwell, H. Richard and ——.** Blue cone systems isolated in atypical congenital achromatopsia—1137(SA*22*)
**Blaise, J. E.** Isotope shift in the line 2537 A of mercury—1130(TC*61*)
**Bone, L. P.**
**Mahan, A. I. and ——.** Far-field diffraction properties of a plane parallel plate when placed in front of a rectangular diffracting aperture—1127(TA*16*)
**Bourret, Richard.** Covariant generalization of the Stokes parameters—1002
**Boyle, W. S. and K. F. Rodgers, Jr.** Performance characteristics of a new low-temperature bolometer—66
**Boynton, Robert M.**
—— Opponent colors model of human color vision—499(TB*46*)
——, **Gillray Kandel, and Judith Wheeler Onley.** Rapid chromatic adaptation of normal and dichromatic observers—654
**Bozman, William R.**
**Coleman, Charles DeWitt and ——.** Prediction of atomic energy levels from rare earth spectra using the IBM-704 computer—511(SB*32*)
**Bradford, A. P., W. W. Erbe, and G. Hass.** Two-step method for producing replica mirrors with epoxy resins —990
**Brandt, Werner**
**Greenewalt, Crawford H. and ——.** Theory of reflectance of inhomogeneous layer structures and the iridescence of hummingbird feathers—1127(TA*18*)
**Bratt, Peter**
**Beyen, Werner, ——, Howard Davis, Leo Johnson, Henry Levinstein, and Alfred MacRae.** Cooled photoconductive infrared detectors—686
**Brauer, F. L. and D. F. Hansen.** *f*/2.9 streak camera—421
**Breazeale, M. A.**
**Hiedemann, E. A. and ——.** Secondary interference in the Fresnel zone of gratings—372
**Brode, Wallace R.**
—— Book review of *Handbook of Physics* edited by E. U. Condon and Hugh Odishaw—104
—— Infrared spectrographs; optical education—5I0(T)(SA*1*)
**Brown, Charles R.**
—— Difference thresholds for intermittent photic stimuli as a function of rate of flash, number of flashes, and presentation time—56
**Forsyth, D. M. and ——.** Flicker contours for intermittent photic stimuli of alternating duration—760
—— **and D. M. Forsyth.** Symmetry of fused complex visual stimuli. II. Asymmetry of duty ratio—1134(FB*38*)
**Brown, H.**
**Carman, P. D. and ——.** Brightness of fine detail in ground photography—629
**Bruce, Robert**
**Rudolph, Hellmuth and ——.** Automatic recording spectropolarimeter—1127(TB*31*)
**Bruemmer, Martha J.**
**Edwards, David F. and ——.** Polarization of infrared radiation by reflection from germanium surfaces—860
**Brugger, John E.**
**Fraser, Walter A. and ——.** Preliminary report on some new nonoxide glass fields—497(TA*20*)
**Brumley, Corwin H.**
**Finkelstein, Nisson A. and ——.** Analog Fourier transformer for apodization studies—410(L)
**Buchdahl, H. A.** Optical aberration coefficients. V. On the quality of predicted displacements—1113
**Budde, W.** On the reflectance of barium sulfate—498(TB*41*)
**Buras, Edmund M., Jr.** Book review of *Fibre Microscopy* by J. L. Stoves—736
**Burnham, Robert W.**
—— Predictions of shifts in color appearance with a change from daylight to tungsten adaptation—254
**Newhall, S. M., ——, and R. M. Evans.** Influence of shadow quality on color appearance—499(TB*48*)/909
**Butler, Warren L.** Absorption spectra in light-scattering materials—1130(TC*65*)

**Cambi, Enzo**
—— Projective formulation of the problems of geometrical optics. I. Theoretical foundations—2
—— Projective formulation of the problems of geometrical optics. II. The design of a centered optical system—15
**Campbell, Charles J. and M. Catherine Rittler.** A new projection adaptometer—1135(FB*40*)
**Campbell, F. W.**
—— **and J. G. Robson.** High-speed infrared optometer—268
—— **and G. Westheimer.** Factors influencing accommodation responses of the human eye—568
**Capellaro, D. F.**
**Kapany, N. S. and ——.** Fiber optics—some recent techniques—1128(TB*39*)
—— **and N. S. Kapany.** Fiber optics—image transfer from Lambertian emitters—1129(TB*40*)
**Carman, P. D. and H. Brown.** Brightness of fine detail in ground photography—629
**Cary, Howard**
**White, John U. and ——.** Double pass grating mount——1132(FA*12*)
**Churchill, Stuart W.**
**Larkin, Bert K. and ——.** Scattering and absorption of electromagnetic radiation by infinite cylinders—188
**Claffy, Esther W. and Robert J. Ginther.** Red-luminescing quartz—412(L)
**Clark, H. L.**
**Bieber, C. F. and ——.** The 100-inch air-borne radiometer —501(TC*64*)
**Clark, K. C. and G. J. Romick.** An auroral spectrograph —141

**Cleary, James R.**
**Wurzburg, F. L., Jr., Alfred Di Bernardo, and ——.** Calculation of small color differences—974
**Cleek, Given W., John J. Villa, and C. H. Hahner.** Refractive indices and transmittances of several optical glasses in the infrared—1090
**Coburn, T. J.**
**Rao, K. Narahari, ——, J. S. Garing, K. Rossmann, and H. H. Nielsen.** Wavelength calibrations in infrared. Part II. Use of atomic lines from a hollow cathode discharge tube with neon as carrier gas—221
**Coleman, Charles DeWitt and William R. Bozman.** Prediction of atomic energy levels from rare earth spectra using the IBM-704 computer—511(SB*32*)
**Condit, H. R.**
**Wolfe, R. N., C. A. Morrison, and ——.** Experimental technique for studying atmospheric turbulence—829(L)
**Condon, E. U. and Hugh Odishaw,** editors. *Handbook of Physics* (Book). Reviewed by Wallace R. Brode—104
**Conklin, Oliver E.** Necrology—1229
**Conklin, Richard L.** Behavior of several phosphors upon irradiation in the vacuum ultraviolet—669
**Cook, G. R.**
**Weissler, G. L., J. A. R. Samson, M. Ogawa, and ——.** Photoionization analysis by mass spectroscopy—338, 736(E)
**Corbett, H. J. and J. P. Saxe.** Examination of I.S.C.C. color aptitude test color differences—1136(SA*16*)
**Corliss, C. H., W. F. Meggers, and C. J. Humphreys.** Improved description of ytterbium spectra—1130(TC*63*)
**Coughlin, John F.**
**Jones, Robert W. and ——.** Ultraviolet band-pass spectrometer—501(TC*68*)
**Cox, J. T.**
**——, J. E. Waylonis, and W. R. Hunter.** Optical properties of zinc sulfide in the vacuum ultraviolet—807
**——, G. Hass, and F. G. Jacobus.** Infrared filters of antireflected Si, Ge, InAs, and InSb—1139(SB*43*)
**Crane, R. C.**
**Czyzak, S. J., ——, and T. M. Bieniewski.** Dichroism in essentially pure and activated cadmium sulfide single crystals—485
**Craven, W. A., Jr., and R. H. Genoud.** Characterization of indium antimonide photodetectors—509(FD*74*)
**Crawford, B. H.** Measurement of color rendering tolerances—1147
**Croes, A. W.** Simple formula for calculating whiteness from photoelectric tristimulus data—830(L)
**Cumming, C., E. J. Fjarlie, and J. Hampson.** Infrared telluric absorption at 40 000 feet—501(TC*66*)
**Curcio, Joseph A. and Kenneth A. Durbin.** Atmospheric transmission at three visible wavelengths—511(SA*15*)
**Czyzak, S. J., R. C. Crane, and T. M. Bieniewski.** Dichroism in essentially pure and activated cadmium sulfide single crystals—485

**Daly, E. F.**
**Tarbet, C. S. C. ——.** Infrared vacuum spectrometer with prism/grating double monochromator—603
**Dannemiller, Mary C.**
**Nimeroff, I., Joan R. Rosenblatt, and ——.** Variability of color-mixture data—1137(SA*20*)
**Darling, Walter R.**
**Washer, Francis E. and ——.** Factors affecting the accuracy of distortion measurements made on the nodal slide optical bench—517
**Davis, Howard**
**Beyen, Werner, Peter Bratt, ——, Leo Johnson, Henry Levinstein, and Alfred MacRae.** Cooled photoconductive infrared detectors—686
**Davis, P. W.**
**Shilliday, T. S. and ——.** Cadmium telluride as a material for infrared optics—497(TA*17*)
**Davis, Sumner P.**
**Harrison, George R., Neville Sturgis, ——, and Yahiko Yamada.** Interferometrically controlled ruling of ten-inch diffraction gratings—205
**DeBell, Arthur G.**
**Simmons, Frederick S. and ——.** Photographic pyrometry with a color-separation camera—735(L)
**De Kerf, J. L. F.** Accuracy of tristimulus computations—102(L)
**DeMott, Donald W.** Direct measures of the retinal image—571
**Derr, Albert J.** Optical unit for reflection densitometry—176
**De Vany, Arthur S.** Compensator curves on lens test plates—1131(TD*75*)
**Di Bernardo, Alfred**
**—— and P. Resnick.** Anomalous spectrophotometric behavior of copper phthalocyanine-benzidine yellow mixtures—480
**Wurzburg, F. L., Jr., ——, and James R. Cleary.** Calculation of small color differences—974
**Doberly, Victor J.** (V. J. Dobroliuboff). Doberly's complementary color reflector—499(TB*51*)
**Dobrowolski, J. A.** Mica interference filters with transmission bands of very narrow half-widths—794
**Doran, Michael D.**
**Baker, Howard D., ——, and Knox E. Miller.** Early dark adaptation to dim luminances—1065
**Dorsey, Noah Ernest.** Necrology—1124
**Douglas, A. E.** New vacuum ultraviolet spectrograph—1132(FA*11*)
**Dreyer, John F.** Relationship of physical makeup to optical performance in a rear projection screen—510(FD*78*)
**Drummeter, L. F., Jr.**
**Hass, Georg, ——, and Milton Schach.** Temperature stabilization of highly reflecting spherical satellites—918
**Drummond, A. J.**
**Ångström, A. K. and ——.** Transmission of "cutoff" glass filters employed in solar radiation research—1096
**Karoli, A. R., A. K. Ångström, and ——.** Dependence on atmospheric pressure of the response characteristics of thermopile radiant energy detectors—1138(SB*35*)

**Stultz, Keith F. and ——.** Relation between graininess and granularity for black-and-white samples with non-uniform granularity spectra—693

# Subject Index to Volume 49

Key to Index use.

1. Subjects, not titles have been indexed.

2. Contents of papers (and abstracts of papers presented at meetings) have been indexed rather than a word breakdown of the title.

3. Principal subjects are given in boldface type. Cross-referenced subjects which should be consulted for a more thorough coverage are given in italics after the principal subject.

4. (L), (B), (E), (N) indicate: (L) Letters to the Editor; (B) Book Reviews; (E) Errata; and (N) Notes including Technical Notes, Personalia, and Necrology. The abstracts of papers presented at meetings are keyed by the same notation that identified them by day and session of presentation. If the paper covered by the abstract has been submitted and published in the same year as the abstract, this has been indicated by a solidus (/) between the abstract notation and the Journal page of the full article, i.e. 264(FA*12*)/622 indicates that the paper described in abstract No. FA12 on page 264 has been published in full on page 622.

5. Subjects have been indexed in subdivisions according to key words with prepositions such as "on," "in," "of," "with," included where essential for euphonious interpretation but not affecting the alphabetical arrangement of the principal subject. In many cases where obvious, these prepositions have been omitted.

**Aberrations**
chromatic
minimized simultaneously with spherical, 308(L)
coefficients
calculation of — using digital computers, 875
quality of predicted displacements, 1113
fifth-order
Ronchi test of, 865
residual
correction of — in automatic lens design, 293
spherical
minimized simultaneously with chromatic, 308(L)
third-order
correction of — in automatic lens design, 293
electron sheet beams, 304
wave-front
of lens system adjusted by differential method, 402

aurora
spectroscopic and photometric studies of, 1127(TA*17*)
stars
visibility of — at high altitude in daylight, 626
**Atmospheric Optics**
attenuation
vertical — in visible, ultraviolet, 356
solar spectral irradiance, 356
volume — function
high altitude, 511(SA*17*)
haze
vertical — structure
ground based observations, 510(SA*14*)
history of, 1132(F*1*)
nitrous oxide
abundance of — in ground-level air, 637
sea horizon
background noise measurements, 1007
solar ultraviolet spectroscopy, 1129(T*52*)
stratosphere
photography, 500(TC*53*)
structure
inference from remote radiation measurements, 504(FA*1*)/1004
transmission measurements
effect of field of new on, 702
at three visible wavelengths, 511(SA*15*)
turbulence
experimental technique for studying, 829(L)
**Atomic Spectra** (see *Spectra*)
**Aviation**
pilot's display projectors, 501(TC*70*)

**Balloon**
atmospheric studies in infrared spectroscopy, 500(TC*52*)

**Barium Fluoride**
index of refraction, 496(TA*13*)
**Barium Sulfate**
reflectance of, 498(TB*41*)
surfaces
chromatic and reflection properties of, 1135(SA*13*)
working standard for photometry and colorimetry, 1135(SA*13*)
**Bass, Arnold M.**
appointed Chief of the Free Radicals Research Section of the National Bureau of Standards, 1124(N)
**Bates, Frederick J.**
necrology, 311(N)
**Billings, Bruce H.**
appointed Assistant Director of Research and Engineering, Department of Defense, 834(N)
**Binoculars**
new military, 1128(TB*32*)
**Birefringence**
calcite, 710
quartz, 710
**Blackbody**
high-temperature
ultraviolet radiometry, 509(FD*73*)
**Blackwell, H. Richard**
appointed Director of the Institute for Research in Vision at The Ohio State University, 107(N)
**Bolometer**
infrared low-temperature
performance of, 66
wedge-shaped non-selective, 1138(SB*36*)

solution of plane of polarization, 405
**Haploscope**
research tilting, 503(TD*80*), 1176
**Herzberger, Max**
named a fellow of the American Association for the Advancement of Science, 1124(N)

**IBM-704 Computer**
atomic energy levels
predicted from rare earth spectra, 511(SB*32*)
**Illuminating Engineering Society**
Golden Jubilee celebration, 420(N)
**Illumination**
cavities
device for simultaneous observation and coaxial — of, 102(L)
**Image** (see also *Lens*)
circular aperture
intensity matrix for, 506(FB*35*)
converter tube
use in ultraviolet microscope, 508(FC*65*)
diffraction
in polarizing microscopes, 191
effect of fluctuations or scattering phenomena in transmitting medium, 1131(TD*76*)
errors
Seidel-aberrations in mirror systems with oblique incidence corresponding to, 1131(TD*73*)
evaluation methods
compared, 506(FB*33*)
spot diagram
wave and geometrical optics using Fourier analysis, 35
infrared
formation by reconstructed wave fronts, 505(FA*18*)
size
for film reader, 169
**Image Tube**
electron-scanned
small object detecting capability
evaluation of, 500(TC*62*)/1209
**Indium Antimonide**
photodetector properties of, 509(FD*74*)
**Information Theory**
human visual system, 639(L)
**Instruments**
electro-optical
automatic celestial tracking systems
terrestrial and space navigation, 501(TC*69*)
Fifth Annual Symposium of the Instrument Society of America, May, 1959, 201(N)
polarizing
optimum half-shade angle, 556
translations of Soviet journals on —, sponsored by the Instrument Society of America, 418(N), 493(N)
**Intensitometer**
self-recording — attachment for microphotometers, 972

**Interference**
calibration method
recording spectrographs, 1100
Fabry-Perot
calcium atomic beam source, 942
filters
all-dielectric — and calculation of properties, 121
phase, dispersion, 1188
transmission characteristics
beams convergent, 126, 1228(E)
parallel beams incident obliquely, 126, 1228(E)
fringes
comparator with photoelectric detection for precision setting, 466
from thin windows, 230
light beams divided by shutter, 931(L)
mercury-198 and path difference of 2000mm, 1126(TA*13*)
spectra
iridescent hummingbird feathers, 1127(TA*18*)
**Interferograms**
Fabry-Perot
wave number measurements, 1126(TA*14*)
**Interferometer**
macro
triangular path — for large transparent objects, 1105 measurements
dispersion — of liquids in 2–22 $\mu$ region, 1228(E)
length
aperture corrections, 733(L)
National Bureau of Standards' Michelson-type, 1126(TA*13*)
mercury-198 interference, 1126(TA*13*)
surface plate, 506(FB*31*)
triangular path
achromatic fringes formed, 732(L)
Woodson — improved, 1126(TA*11*)
**Interferometry**
astronomy and applied, 1127(TA*15*)
Fabry-Perot
phase shift effects, 1126(TA*12*)
gauge
length of end standards, *232*
infrared spectral line shape determined with, 1138(SB*37*)
length determinations
surface roughness and phase change effect on, 476
photoelectric setting method for, 930(L)
symposium on —, National Physical Laboratory, England, June, 1959, 316(N), 1126(T*1*)
wavelength accurately measured
mercury 2537 line as primary standard of length, 512(SB*34*)
**International Commission on Illumination (C.I.E.)**
publishes a "Report on the Colors of Light Signals," 832(N)
report on 14th plenary session, Brussels, 1959, 1135(S*1*)

named a Fellow of the Society of Photographic Scientists and Engineers, 202(N)

**Layer** (see *Film*)
**Lamps**
fluorescent
cylindrical aperture, 1133(FB*33*)
mercury arc discharge
Huggins-Bol, Type A, high-pressure, 381
tungsten-filament
spectral radiant intensities of, 400–700 m$\mu$, 1122(L)
**Length**
standard
mercury 2537 absorption line as primary, 512(SB*34*)
**Lens** (see also *Image*)
aberrations
fifth-order
Ronchi test of, 865
residual
correction of — in automatic lens design, 293
third-order
correction of — in automatic lens design, 293
wave-front
differential method for adjusting, 402
achromatic — system
glass selection for three-color, 398
aerial-survey
distortion reduced with corrector plate, 1131(TD*74*)
arsenic sulfide system
high speed, 505(FA*16*)
concentric, 506(FB*34*)/862
design
apodization
analog Fourier transformer for, 410(L)
automatic — by least squares method, 293
dispersion and optical correction, 513(SB*40*)
image quality
spot diagram evaluation using Fourier analysis and comparison of wave optics and geometrical optics, 35
ophthalmic
multifocal segment
formula derivation for specification of reciprocal relative dispersion, 490(L)
optical constants
nodal slide optical bench, 517
distortion evaluated, 517
sine-wave response
measurement of, 413(L)
system
high speed 2- and 3-element — of arsenic sulfide, 505 (FA*16*)
Taylor triplets
optical glass selection, 31
residual longitudinal chromatic aberration, 872
telescope doublets, 200(L)
glass choice, 869
test plates
compensator curves on, 1131(TD*75*)
thin — analysis
secondary spectrum and, 640(L)

**Light**
Commission International de l'Eclairage, quadrennial meeting, Brussels, June, 1959, 934(N)
signal
identification of blue, green, white, and purple, 45
elimination of purple category, 167
report on colors of — published by the International Commission Illumination, 832(N)
velocity of, 930(L)
**Loomis, Frederick K.**
necrology, 1024(N)
**Luminance** (see also *Brightness*)

**Mack, Julian E.**
appointed Scientific Attache to Stockholm Embassy, 108(N)
**Magnesium Fluoride**
high-temperature properties of, 497(TA*15*)
**Magnesium Oxide**
high-temperature properties of, 497(TA*15*)
**Meggers, William F.**
elected honorary member of the Optical Society, 1958, 1
**Meissner, Karl Wilhelm**
necrology, 1024(N)
**Meteorology**
solar radiation research
"cutoff" glass filters, 1096
**Metrology**
minutes of the 1957 session of the Advisory Committee for the Definition of the Meter, 310(B)

arc, 680
of values determined, 680
self-absorption, 680
high-excitation lines, 948
mercury
2537A line
isotope shift in, 1130(TC*61*)
as primary standard of length, 512(SB*34*)
phosphorus (P I and P II), 1071
rare earth
atomic energy levels predicted using IBM-704 computer, 511(SB*32*)
ruthenium (Ru I)
first spectrum and low even configurations, 838
sun, 1129(T*52*)
tabulation of elements and, 933(N)
thallium
hyperfine structure of Tl 203 and Tl 205 in $7^2S_{\frac{1}{2}}$ state, 1088
thorium
first spectrum of, 512(SB*33*)
uranium
isotopes 235, 236, and 238 analyzed, 1130(TC*62*)
ytterbium, 1130(TC*63*)
atomic energy levels
rare earth — predicted using IBM-704 computer, 511 (SB*32*)
echelle
wavelength measured accurately, 441
fluorescent
apparatus for recording automatically, 673
**Infrared**
emission
neon, 221
report on "The Determination of Near Infrared Spectra" by the Anderson Physical Laboratory is now available, 642(N)
wavelength calibrations
absolute positions of infrared lines, 216
atomic lines from hollow cathode discharge tube with neon carrier gas, 221
line shapes
parameters for — and dependence on intensity and damping, 609
**Molecular, Absorption, Infrared**
ammonia, 512(SB*38*)
argon I, 512(SB*36*), 1186
carbon dioxide
self absorption in 4.3μ band, 505(FA*17*)
chlorine
first spectrum of, 1180
gases
pressure modulation, 212
lines in vibration-rotation bands, 212
hydrogen cyanide, 512(SB*38*)
hydrogen sulfide, 309(L)
krypton I, 1186
nitrous oxide in ground-level air, 637
solar, 501(TC*66*)
sunseeker for high-altitude, 501(TC*65*)
water, 309(L), 512(SB*37*)
emissivities and vibrational energy distribution, 512 (SB*37*)
pure rotation band, 1139(SB*39*)
**Molecular, Absorption, Ultraviolet, Visible**
diatomic molecules, $H_2$ and CH, 1130(T*54*)
free radicals, $CH_3$ and $CH_2$, 1130(T*54*)
nitric oxide, 1130(TC*64*)
pigments in intensity-scattering media, 1130(TC*65*)
polyatomic molecules, HCN and $CF_3I$, 1130(T*54*)
**Molecular, Emission, Infrared**
pressure-modulation studies, 512(SB*39*)
nitrous oxide, 512(SB*39*)
**Molecular, Emission, Visible, Ultraviolet**
**Zeeman Effect**
plutonium (Pu II), 162
-split absorption lines
as narrow pass filters, 199(L)
**Spectrochimica Acta**
now published on a monthly basis, 316(N)
**Spectrochemical Analysis**
index to the literature on, 1229(N)
metals
using combination discharge source, 349
source
combination discharge and analysis of metals, 349
**Spectrograph, Spectrography**
auroral, 141

concave grating
absolute wavelength measurements with, 1132(FA*15*)
course at Boston College, July, 1959, 493(N), 642(N)
drum-streak
time-resolving — of high dispersion, 1132(FA*14*)
Eagle vacuum
concave grating theory applied to off-plane, 460
grating
concave — for extreme ultraviolet
grazing-incidence
speed increased, 139
large-aperture — with commercial camera components, 1223
interferometric
far infrared, 309(L)
hydrogen sulfide spectra, 309(L)
water spectra, 309(L)
Littrow
*f*/6 grating, 1133(FA*16*)
recording
calibration of — by interference method, 1100
vacuum ultraviolet, 1132(FA*11*)
concave grating in modified Eagle mounting, 1132 (FA*11*)
**Spectrometer, Spectrometry, Spectrophotometer, Spectrophotometry** (see also *Photometer*)
data
converted to color coordinates
Librascope Digital Readout Unit, 1136(SA*14*)
Ebert — for far infrared, 966
infrared
double-beam
combined with holhraum
diffuse and total reflectance in infrared studied, 1139(SB*42*)
Perkin-Elmer Model 21
high temperature, 856
5-meter vacuum, 1217
line shapes determined directly with interferometer, 1138(SB*37*)
optical constants of iron, 1140(SB*46*)
vacuum — with prism/grating double monochromator, 603
mass
Seventh Meeting, American Society for Testing Materials, Los Angeles, May, 1959, 106(N), 417(N)
vacuum ultraviolet monochromator crossed with, 1129 (T*53*)
photoionizing action studies, 1129(T*53*)
reflectance
copper phthalocyanine-benzidine yellow mixtures, 480
visible and infrared — for field use, 501(TC*67*)
response data
principal component analysis, 1133(FA*18*)
"shot" noise limited
optimum optical density for, 1227(L)
solar
sunseeker and lithium fluoride prism spectrometer, 501(TC*66*)
ultraviolet
band-pass, 501(TC*68*)
**Spectropolarimeter**
automatic recording, 1127(TB*31*)
**Spectroradiometer, Spectroradiometry**
ratio-recording, 1135(SA*12*)
**Spectroscopy**
applied
symposia
Eleventh Pittsburgh Conference on — and Analytical Chemistry, February, 1960, 1123(N)
Sixth Ottawa Symposium, Canadian Association for Applied Spectroscopy, September, 1959, 418(N)
Society for Applied Spectroscopy, New York, November, 1959, 641(N)

107, 202, 312, 418, 494, 643, 738, 834, 935, 1025, 1125, 1229
**Telescope**
balloon-borne
high-definition astronomical photography from stratosphere, 500(TC53)
doublets
glass choice, 869
and zonal spherical aberration, 200(L)
glass mirror blank cast for National Observatory, 492(N)
**Television**
infrared — camera take
photoconductors
doped silicon and germanium, 997
**Thun, Rudolph E. A.**
presented the Commanding General's Medal for Technological Achievement at Research and Development Laboratories, Fort Belvoir, Virginia, 934(N)
**Tilton, Leroy W.**
retired from the National Bureau of Standards, September, 1958, 202(N)
**Transmission** (see also *Transmittance*)
**Transmittance** (see *Transmission*)
infrared
using Perkin-Elmer 21 with furnace attachment, 497 (TA16)/856
liquid
cells with thin windows producing interference fringes, 230
**Tungsten**
spectral emissivity, 619
**Twyman, Frank**
necrology, 834(N)

**U. S. Department of Commerce, Office of Technical Services**
new publications, 642(N), 737(N), 833(N)
revised listing of abstracted Russian technical journals, 1123(N)
**U.S.S.R.**
optics in
astronomy
instruments, 510(SA3)
programs, 510(SA4)
education, 510(SA1)
hydro- — by Academy of Sciences, 510(SA11)
rocket spectroscopy
airglow and aurora observations, 510(SA2)
spectrography
infrared, 510(SA1)

**Vision**
acuity
brightness and — with intermittent illumination, 104(E)
fine line and effect of length, 898
out-of-focus images, 503(TD81)

stereoscopic
observation distance and, 639(L)
adaptation
chromatic
normal and dichromatic observers, 654
and short term dark
human electroretinogram, 1169
dark
test stimulus effect on, 667
light
monocular
neural limitations of visual excitability, 752
binocular
coordination
tilting haploscope, 503(TD*80*)
brightness
acuity and — with intermittent illumination, 104(E)
discrimination
CRT signal detection and
neutral density filters used, 1134(FB*36*)
color
achromatopsia
atypical congenital
blue cone systems isolated, 1137(SA*22*)
appearance
shadow quality influence on, 499(TB*49*)/909
shifts predicted with change from daylight to tungsten adaptation, 254
cause and effect discontinuity, 499(TB*48*)
deficient
blue mono-cone monochromacy
red monochromacy compared with, 499(TB*47*)
dependence on focal surrounding, and preceding stimulus variables, 890
discrimination, small-field, 1143
limit of — zone in perimetry, 764
mechanism
primaries implied by Fry's formulation of dichromatism, 415(L)
opponent — model, 499(TB*46*)
phenomenon of greenish-yellow blotch, 1041
theory and response functions, 1226(L)
critical flicker frequency
chromatic stimuli effect on chromatic, 502(TD*76*)
discrimination
depth
function of binocular differences of retinal illuminance at scotopic and photopic levels, 503(TD*79*)/746
eye
adaptation
dark — to dim luminances, 1065
cat
retinal image measured directly, 571
electroretinogram
human — and chromatic and short term dark adaptation, 1169
human
accommodation responses, 568
electroretinogram of dark-adapted
cone and rod interaction, 411(L)
movements, 741
analyzing of — during free search, 287
compensation for — and visual effects, 741
nystagmus induced by visual feedback, 729(L)
retina
peripheral
uniocular and binocular scotopic responsiveness, 394
steer
retinal image measured directly, 571
flicker contours
intermittent photic stimuli of alternating duration, 760
fovea
human
depth of focus, 273
quantum efficiency of, 502(TD*72*)/645
spectral sensitivity
high brightness and absolute threshold, 502(TD*75*), 983
relative — as function of retinal illuminance, 1137(SA*23*)
thresholds for small targets, 502(TD*73*)
various pupil diameters in absolute units of energy, 502(TD*73*)
frequency response
sharp edges in flickering field, 730(L)
haploscope
research tilting, 503(TD*80*), 1176
human
information theory and, 639(L)
quantum efficiency of, 502(TD*72*)/645
image
out-of-focus, 503(TD*81*)
perception
normal — development
moon illusion as consequence, 504(TD*82*)
refraction
optometer, high-speed infrared, 268
retina
critical flicker frequency
striated fields' effect on, 580
electroretinogram during light adaptation, 502(TD*71*)
image during monocular fixation
two-dimensional motion of image, 901
light distribution for circular apertures in Maxwellian view, 41
model — receptor
response of — as wavelength function, 1134(FB*39*)
peripheral
absolute sensitivity of — and changing size and exposure time, 503(TD*77*)
resolution
method for measuring, 504(TD*83*)
sensitivity
measurement of — with low contrast flicker, 503(TD*78*)
projection adaptometer, 1135(FB*40*)
search behavior
free — and eye movements analyzed, 287
parameters of, 280
effect of size of complex, 280
stimuli
fused complex
asymmetry of duty ratio, 1134(FB*38*)
time symmetry of, 1134(FB*37*)
threshold
absolute
and high brightness
spectral sensitivity data compared, 502(TD*75*), 983
binocular
of peripheral retina, 394
depth-discrimination
function of binocular differences of retinal illuminance at scotopic and photopic levels, 503(TD*79*)/746
difference
for intermittent photic stimuli
function of rate and number of flashes, and presentation time, 56

**Vision** (Continued)
measured as "instantaneous" to adapting field change, 502(TD*74*)
monocular
of peripheral retina, 394
underwater — predictions
field test of, 1134(FB*35*)

**Warga, Mary**
appointed first Executive Secretary of the Optical Society of America, 836(N)
**Wavelength**
absolute measurements
concave grating spectrograph, 1132(FA*15*)
calibration
infrared
absolute positions of infrared lines, 216
atomic lines from hollow cathode discharge tube with neon carrier gas, 221
measurement
echelle spectra and accurate, 441
standards
calcium atomic beam source, 434
**Wedge**
two-dimensional
far-field diffraction and boresight error properties, 535
**Weniger, Willibald**
necrology, 1024(N)

**X-Rays** (see also *Radiation, Sources, and Spectra*)
